

This permanent, robust system is ideal for new construction or facilities where digging is permitted. The divider panels are supported by heavy-duty 66" poles (4' above ground height) secured by ground sleeves. The complete system includes poles, divider panel, tension hardware. Ground sleeves and protective pole padding are optional.

## SPECIFICATIONS

### POSTS

The standard in-ground support poles are 2-7/8" OD and are 66" in length for 4' above ground height. These round poles and hardware collars are constructed from 8-gauge steel and are finished with a black baked-on polyester powder coat to resist rust and increase durability. Poles can be ordered up to 4'6" in above ground height. 24" Aluminum ground sleeves are recommended.

### HARDWARE

All hardware components for the tension cable system are comprised of galvanized steel for maximum strength and longevity. Hardware includes 1/4" cable, cable clamps, turnbuckles, and attachment components.

### DIVIDER PANELS

Divider panels are custom fabricated from either VCP MAX windscreen mesh or from #420 Knotless Pylon netting. Both divider panel options are sewn with a top headband pocket that conceals all the tension hardware for an attractive finish with no exposed components. The sides and bottoms of the divider panels have reinforced tape borders that are double sewn with 1-1/2" solid vinyl and complete with #2 brass grommets spaced evenly for easy installation.

**WINDSCREEN** VCP MAX windscreen mesh material has a 4-year limited warranty and is available in Black, Dark Green or Open Tournament Blue. This mesh material offers a nice visual blockage and has an 85% windbreak. The material has great weather resistance and custom digital printing can be printed directly on the material.

**NETTING** Black #420 Knotless Polypropylene (Pylon) is an ideal netting for court dividers. This lightweight, 1-1/2" square mesh boasts a 125# break strength and is completely weather treated to withstand the elements. Netting has a 4-year limited warranty.

### PADDING - OPTIONAL

The optional pole padding is aesthetically pleasing and is recommended for player safety. The standard wraparound pole pad is 4' high and is 17" wide to completely wrap around the pole. The pad is secured around the pole with double stitched Velcro straps. The pole padding wrap is comprised of two-inch-thick high impact foam that is wrapped in all-weather vinyl that is mildew and UV resistant. Black padding is standard; additional available colors include forest green, royal blue, navy, and red.
